Falcon

- A Vue framework HMI, deployed with Electron, controlling a sheet runner front to back paired with a homebrewed server for handling tag data.
- Provided feature support to 10 machines based in Indonesia over many months culminating in a noticeable performance enhancement.
- I was also responsible for many on-demand calibrations, long-standing bug fixes, and restructuring of the legacy codebase.

Econ

- An HMI, written in C#, I provided support while also handling improvement updates for Falcon.
- I was tasked independently to build the sales options requiring modifications and the creation of entirely new operator controls.
- Upon completion and rigorous testing to make sure the Beckhoff TwinCat PLC software worked in conjunction, updates were deployed on time.

Navigator

- An HMI combining the older systems into one robust React web app interface, deployed with docker, along with a mobile view version.
- Data management was handled through various tools like SignalR, Rest APIs, and in-house tools.
- I oversaw the entire project from the first line of code to the last customer handshake and during production led weekly catch ups and planned monthly sprints with a skilled and capable team.

University of Northern Iowa

**Bachelor of Arts, Major in Computer Science,
Minor in Interactive Digital Studies**

- Kappa Sigma Executive Committee
 - Reoccurring Dean's List recipient
-

Software Engineer - BWP

Madison, WI 2023 - present

- Engineered multiple new and old HMI's across a diverse set of platforms and deployed updates based on customer requirements.
 - Collaborated with senior engineering peers in order to provide efficient, quality development, and timely release of options for current and future machines.
 - Developed new innovative software targeted for customer use to increase production, minimize downtime, and maximize profit
-

System Assembler - CPU Solutions

Middleton, WI 2023

- Assembled computers with a variety of elements in a fast paced environment, including servers for Super Micro Computer Inc..
 - Obtained knowledge of industry leading components, functionality, and compatibility within various systems.
 - Informed clients of the best choice in their system for any intended use.
-

Software Developer - TechWorks

Waterloo, IA 2023

- Collaborated with my team to discuss future projects and programs to implement.
 - Acquired leadership and teamwork skills while developing applications to improve and automate company's daily tasks and improve efficiency.
 - Maintained a growth mindset while overcoming challenges designing complex programs.
-

IT Assistant - University of Northern Iowa

Cedar Falls, IA 2022 - 2023

- Partnered with university system administrators to improve and formalize a website used by thousands of students and faculty alike.
- Directed weekly team meetings on designated topics for current and future assignments.
- Launched hundreds of support documents, repaired web links daily, assisted with high level and fast paced needs.
